

Github Automation with Jenkins :

Create a github repo to make jenkins on track it .

- **Setup Webhook in GitHub**

- In GitHub repo:
- Settings → Webhooks → Add webhook
- Payload URL: using **ngrok** to forward local host to public URL
- <https://your-ngrok-url/github-webhook/>
- Content type:
- application/json
- Now GitHub informs Jenkins when code is pushed.

- **Create Jenkins Job**

- Jenkins Dashboard → New Item
- Create job: **GithubAutoJob**
- Select Freestyle Project
 - This job will build the project.

- **Connect Jenkins to GitHub**

- Inside job → Configure:
- Source Code Management → Git
- Add Repository URL:
 - <https://github.com/username/jenkins-sample.git>
 - Now Jenkins can pull code from GitHub.

The screenshot shows the Jenkins web interface. At the top, the breadcrumb navigation is 'Jenkins / GithubAutoJob / Configure'. On the left, a sidebar titled 'Configure' lists several tabs: 'General', 'Source Code Management' (which is highlighted), 'Triggers', 'Environment', 'Build Steps', and 'Post-build Actions'. The main content area is titled 'Source Code Management' and contains the instruction 'Connect and manage your code repository to automatically pull the latest code for your builds.' Below this, there are two radio buttons: 'None' and 'Git' (which is selected). Under the 'Git' selection, there is a section for 'Repositories'. It contains a text input field for 'Repository URL' with the value 'https://github.com/varuneshRA/jenkins-sample'. Below the URL field is a 'Credentials' dropdown menu currently showing '- none -' and an '+ Add' button. At the bottom of the repository configuration box is an 'Advanced' dropdown menu.

- **Add Build Step (Tell Jenkins What To Run)**
 - Very Important Step
- Configure → Build
- Add build step → Execute Windows batch command
 - If files inside src folder:
 - `cd src`
`javac Calculator.java CalculatorMain.java`
`java CalculatorMain`
 - This compiles and runs Java program.
- **◆ Enable Automatic Trigger**
 - In job → Configure → Build Triggers:
 - Check:
 - GitHub hook trigger for GITScm polling
 - This allows webhook to trigger job.

Build Steps

Automate your build process with ordered tasks like code compilation, testi

⋮

Execute Windows batch command ?

Command

[See the list of available environment variables](#)

```
javac Calculator.java CalculatorMain.java
java CalculatorMain
```

Advanced ▼

- **What Happens After Push?**

- When you run:
- `git push`
- Flow:
- Code goes to GitHub
- GitHub sends webhook
- Jenkins receives event
- Jenkins pulls latest code
- Executes batch command
- Console Output shows result

```
C:\Users\Admin\.jenkins\workspace\GithubAutoJob>javac Calculator.java CalculatorMain.java
```

```
C:\Users\Admin\.jenkins\workspace\GithubAutoJob>java CalculatorMain
```

```
Sum: 8
```

```
Difference: 2
```

```
Product: 15
```

```
C:\Users\Admin\.jenkins\workspace\GithubAutoJob>exit 0
```

```
Finished: SUCCESS
```

The screenshot shows the Jenkins web interface in a browser. The address bar displays 'localhost:8080/job/GithubAutoJob/5/'. The page header includes the Jenkins logo and the job name 'GithubAutoJob' with a dropdown arrow and the build number '#5'. On the left, a sidebar contains links: 'Status' (highlighted), 'Changes', 'Console Output', 'Edit Build Information', 'Delete build '#5'', 'Polling Log', 'Timings', 'Git Build Data', and 'Previous Build'. The main content area shows a green checkmark icon followed by '#5 (24 Feb 2026, 22:19:55)'. Below this, it says 'Started by GitHub push by varuneshRA'. A clock icon indicates 'This run spent:' followed by a list: '9.8 sec waiting;', '4.2 sec build duration;', and '14 sec total from scheduled to completion.'. The 'git' icon is shown with 'Revision: dec6de546a86bb61ebda67ec3f4a6af73c915bea' and 'Repository: https://github.com/varuneshRA/jenkins-sample'. Below that, it lists 'refs/remotes/origin/main'. At the bottom, a code icon is next to 'update' and the commit hash 'dec6de5', with a user icon and 'ravarunesh at 22:19 24/02/2026'.
